

iREJU REVITAL SERUM

Premium PDRN skinbooster

iREJU REVITAL SERUM

PACKING

5mL x 5 vials
5 vials x 1 box

INDICATIONS

Dermal anti-aging and regenerating ampoule with 10,000ppm PDRN, HA solution and amino acid solution. iREJU REVITAL SERUM enhances skin density and helps regenerating skin barrier through improvement of skin dermis density and thickness.

EFFECT

Skin Regeneration

Improved Skin
Elasticity

Improved Wrinkles

Stimulated Cell
Function

Skin Moisturizing

MAIN INGREDIENTS

PDRN (Salmon DNA)

Promotes growth-factor and VEGF production, improves blood circulation, and induces fibrocyte differentiation while reducing inflammation. It boosts collagen and extracellular matrix synthesis, supports capillary formation for tissue regeneration, and helps smooth wrinkles. By increasing the rate of new cell formation, it also contributes to a brightening effect.

Butylene Glycol

Butylene glycol is beneficial for the skin as it attracts and holds moisture, helping keep the skin hydrated, soft, and smooth. It also improves product absorption, enhances texture, and supports ingredient stability, making formulas more effective and pleasant to use.

Centella Asiatica

It prevents and improves skin damage and has antibacterial, anti-psoriatic, and wound-healing effects. It helps prevent dryness, relieves irritation, and provides a soothing effect while also improving elasticity and minimizing pores. It reduces excess shine caused by sebum and keeps the skin supple and smooth.

Tetrapeptide-44

Tetrapeptide-44 helps calm inflammation, strengthen the skin barrier, and regulate sebum, making the skin clearer, smoother, and more balanced. It also supports overall skin repair and resilience.

HOW TO USE

Use dermapen or MTS roller

Recommended course consists of 4 sessions with interval of 2-3 weeks and additional session for maintaining the result after 4 weeks from the last treatment.

CAUTIONS

- ❖ For people with existing skin problems such as acne, the treatment should be performed only after the skin has fully healed.
- ❖ If there are any hygiene issues during the procedure, bacteria can enter the skin and cause inflammation, so proper care is essential.

POST TREATMENT

- ❖ It is prohibited to use chemical treatments such as hair dye after the procedure
- ❖ Refrain from applying makeup for at least 4 hours after the treatment
- ❖ As the treatment requires a regeneration period, the visible effect usually appears about one month after the first session
- ❖ Redness and a feeling of warmth may occur after the procedure, so it is necessary to soothe the skin with a mask, for example, the iREJU XO Hydrogel Mask, which will also enhance the treatment results
